Thirty Road Reconstruction

PROJECT LOCATION:

Thirty Road (King Street to South Town Limit)

PROJECT BACKGROUND:

Thirty Road from King Street to the south Town limit requires a full road reconstruction to improve road user safety and accommodate increased traffic in the area.

Additionally, safety concerns and potential embankment erosion are prompting the Town to upgrade Thirty Road including a widened road platform, additional roadside safety measures, streetlighting upgrades and drainage improvements.

Slope stabilization works might also be required and may include property acquisition, as the existing road allowance along this corridor is narrow in some locations. Collaboration with the Niagara Escarpment Commission (NEC) and the Town of Grimsby will be necessary, as this corridor is within NEC jurisdiction. As such, roadworks crossing the south Town limits may be required.

PROJECT DESCRIPTION:

This project involves full road reconstruction from King Street to the South Town Limit.
Key project elements include:

- Approximately 1.2 km of reconstructed roadway to a rural cross-section
- Road built to a standard to support increased traffic and active transportation
- Streetlighting upgrades

Community Investment Update

An update on the construction in your neighbourhood

- Improved local area drainage including slope drainage improvements, culvert replacements and regraded ditch systems as required
- Potential for slope stabilization works and upgraded roadside safety systems
- Property acquisition in support of road widening as required

PROJECT UPDATE

The Town of Lincoln has recently retained Urban & Environmental Management Inc. to prepare the detailed design plans for the Thirty Road Reconstruction project.

WHAT TO EXPECT NEXT

Over the next several months, the consultant will complete various field-related investigations, including a topographic survey, geotechnical analysis, and subsurface utility evaluations. You may sometimes notice project team members taking measurements and using survey equipment near your property. This field-related work is necessary to complete the overall design, and we appreciate your patience during this project phase. The Town is confident that the design team will act professionally and courteously to you and your property throughout the field investigation process.

You will be invited to engage with the project team, ask questions, and review the preliminary design drawings at our upcoming Public Information Centre. Details of the session, including how to attend, will be communicated to residents through direct mail, a local newspaper announcement, and posted on the Speak Up Lincoln webpage. This event is anticipated to take place in March 2024. Your insights are integral to this process, and we look forward to hearing your thoughts.

IMPORTANT REMINDERS:

Utility Locates

Throughout the project, you may notice paint markings and flags along the road corridor and at the front of your property. These markings will be completed by a Utility Locating Contractor responsible for detecting underground infrastructure and subsurface utilities. Utility marking and locating is a process for identifying and labelling underground public utility mains and cables to protect them from damage during excavation and aid during the project's design phase.

Please leave any flagging in place to allow time for the survey team to identify each of the underground services accurately. The Town appreciates your patience regarding any areas temporarily marked with spray paint. The locators are mindful of the placement of their markings and will attempt to limit their impact on any decorative surfaces. Ideally, the locators will spray their markings on grassed areas or Town-owned roads and infrastructure.
